solutions

world leaders in loading solutions

We are Joloda Hydraroll and we are experts in material handling, particularly for loading and unloading processes.

We're more than 'off-the-shelf'. We're the pioneers, the creators, the experts. We design, manufacture, install, service and maintain world-class loading solutions. Here to innovate, automate and streamline your logistics to create the ideal solution to your loading problems.

Our world-class team have been loading and unloading for over 60 years and we have more than 500,000 systems under our belt. We have an experienced network of 30+ distributors that offer a helping hand to have experts in local standards.

If you're looking for a cost-effective, modular, easy operation and install system, our manual loading solutions are ideal for vans, trucks, trailers, containers, warehouses, factories and many more...

lightening loads around the world

introducing... skate & track

Our Skate & Track system offers the ultimate ease for manual loading.

Purposefully designed for trucks and lighter transport vehicles, this efficient system lightens the load with the clever use of rolling skates built into a sunken track, so no forklift truck needed to enter the vehicle.

IS IT RIGHT FOR YOU?

If your business is shifting heavy goods, from pallets and drums to slipsheets and heavy machinery, then Skate & Track will revolutionise your ways of working. Struggle with limited space and no dock levellers? It's the perfect system for this too.

THE BENEFITS

No forklift trucks required, helping to avoid product damage

Skates can lift and load up to 3.5 tonnes, no forklifts needed

Only one or two people required

Fail-safe system with front and rear safety brakes

Minimum maintenance with a self-cleaning system

Reduced carbon footprint

introducing... rollertrack

If you want faster, flexible loading, easier handling and reduction in forklift damage, then our Rollertrack system offers a great solution.

With systems available for trucks, trailers, vans, warehouses and production lines, our Rollertrack system is all about lightening the load. It has a pneumatic rise and fall floor to help you move loads easily.

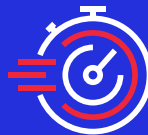

IS IT RIGHT FOR YOU?

If you want faster loading, easier handling and reduction in forklift damage, then this system offers a great solution.

THE BENEFITS

No forklift trucks required, helping to avoid product damage

Faster loading & unloading of large or special heavy loads

Only one or two people required

Easy maintenance

100% safe during loading and while cargo is in transit

introducing... modular rollerbed

Our Modular Rollerbed System (MRS) for warehouses is perfect for converting and upgrading an existing warehouse space into a fully-functioning cargo transit station.

The system arrives pre-built with an aluminium platform and integrated pneumatic rise and fall rollertracks, meaning no modifications or civil works are needed to existing structures and it can easily be installed onto an existing concrete warehouse floor.

IS IT RIGHT FOR YOU?

If you're looking to create new or increase air cargo handling capacity, then this is an expertly-designed modular and retrofit solution. There is no need for complex designs or permanent changes to existing buildings, making it ideal for those who rent or short-term lease premises or who need a quick solution to meet increasing demands.

THE BENEFITS

No forklift trucks required, helping to avoid product damage

Faster loading & unloading of large or special heavy loads

Only one or two people required

100% safe during loading and movement around warehouse

Reduces maintenance and increases airbag's life

Transform any warehouse in a few hours

Manual Loading Solutions

Powered Cargo Rollers

joloda
hydraroll

introducing... powered cargo rollers

This fully-automated solution is perfect for handling air cargo.

It is a combination of pneumatic rise and fall rollertracks and pneumatic-electric operated drive rollers, making it ideal for handling heavy and oversized air cargo loads. It boasts a remote operated system that can be controlled by a single operative and full integration into the vehicle floor. With no hydraulics, it's perfect for air-side operations.

IS IT RIGHT FOR YOU?

This system is a must for transport and logistics companies handling heavy and oversized air cargo loads including aero engines, or who need a reliable, robust automated loading solution. Its low-tech, yet robust design combined with ease of use and simple maintenance makes the system ideal for air cargo transport operations.

THE BENEFITS

No forklift trucks required, helping to avoid product damage

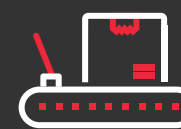

More eco-friendly, with no oil required

Load air cargo containers safely and efficiently with no damage

100% safe during loading and while goods are in transit

Roll-out is prevented when power is not applied with the braked motor

Easy maintenance

container loading

Similar in design to the Skate & Track system but with added hydraulics, this solution is specifically designed for loading sea and box containers.

This system comfortably handles pallets from 1.2m up to 13.5m and weights of up to 27 tonnes. Temporary tracks are laid on the container floor to allow goods to be loaded and can quickly and easily removed.

IS IT RIGHT FOR YOU?

This system is ideal for the speedy shifting of large, heavy loads without needing to invest in open-top containers. And when it comes to fragile or high-value loads, it offers a solution that reduces product damage as goods are moved in a more controlled way.

THE BENEFITS

Load and unload containers of any length

Save on loading time

Reduce risk of damage to goods

Can load up to 27 tonnes

container lifting

Our hydraulic lifting system (known as MDS) is purposefully designed to lift sea and box containers from the chassis to the ground, or vice versa.

Ideal for remote sites thanks to legs that can be easily attached/removed with a small forklift. This lightweight system can handle up to 35 tonnes and can help to level containers with the loading platform.

IS IT RIGHT FOR YOU?

The MDS system is the perfect combination of low-tech design, simple operation and cost effectiveness for low to mid-range container handling. This smart system is a wise investment against a heavy-duty forklift and is a great way to level containers that are being moved to or from a platform.

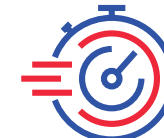

THE BENEFITS

Single person operation

Offload and reload up to 35 tonne containers, anywhere

Efficient 20 minute container turnaround time

Modular design for simple operation

if you have any questions, please get in touch!

We work closely with your business to design an industry-leading loading and unloading solution. Our solutions work seamlessly with your business's unique material handling challenges and will provide unparalleled long-term benefits.

Get in touch with our team today and see how our loading systems can transform your business.
