

 **GREYORANGE**
Authorized Partner

ORDER PICKING / DISTRIBUTION SYSTEMS

As an official partner of GreyOrange, we offer goods to man robotics "BUTLER" systems. The GreyOrange Butler is an advanced autonomous mobile robot that uses robotic goods-to-man technology for automated put-away, inventory storage, replenishment and order picking in fulfilment and distribution centers. This goods-to-man automation system with robots in the warehouse, adapts seamlessly to changing inventory profiles, demand patterns and peaks. Modular system architecture ensures bi-directional scalability to increase storage volume or fulfillment throughput independently, by adding more storage racks or robots, as needed.

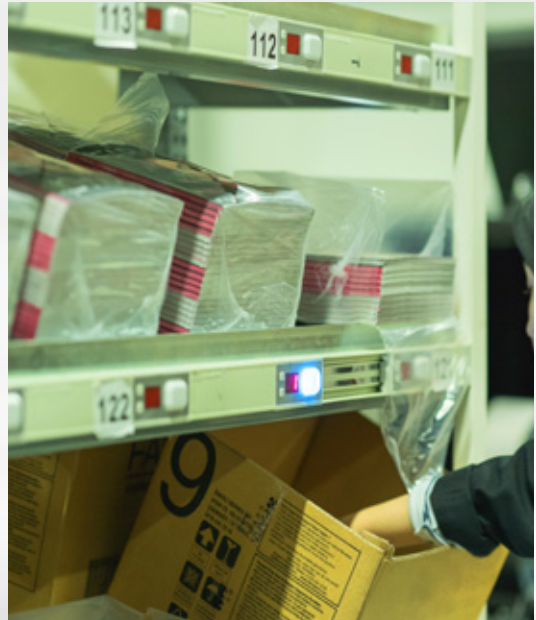

As an alternative solution to fully automated systems, Lodamaster offers pick/put to light technology which visually helps operators to pick/put items quickly and in a more accurate way by using lights.

ORDER PICKING / DISTRIBUTION SYSTEMS
